Key Improvement Themes

These release notes summarise the key improvements and associated benefits of the latest version of Aryza insol6.app. Additionally, they list all fixes included in this release.

- Invoice formats have been updated to clearly itemise the GST component for each Time/Disbursement entry included in the bill. Additionally, the issue causing blank pages when printing multi-page invoices has been resolved.
- Token issues that occurred when users had simultaneous logins across multiple browser tabs have been fixed.

New Features

Discover the latest advancements in our software with an array of powerful new features designed to elevate your experience.

- A new feature to enable multiple low recovery periods has been introduced. This feature is currently undergoing user testing and therefore not enabled for general release. Please contact Aryza to discuss a licence upgrade.

View [small enhancements](#) for further information on this new feature.

Small Enhancements

Experience seamless efficiency with our latest software enhancements

- The recoverable percentages in the Time Review area now support multiple recoverability periods.
- The Dashboard recovery graph has been updated to handle multiple recovery periods.
- The job short name is now included on the job summary page.
- When creating a Time entry for a transitioned job, the date entered will default to the job type at that time.
- The ability to add an effective start date for future positions, has been added to the Employee Positions area within settings.
- A narrative now displays when entering Time entries during a low recovery period.
- The Employee Capacity Report has been phased out as it was a duplicate of the functionality of the productivity tab in the Time Review area.
